1 Intro

Welcome to the GloBAM Data Management Plan.

2 European radar data

This page describes European radar data (`pvol`) and derived data products (`vp` and `vpts`).

2.1 License agreement

European radar data exchange is coordinated by the *European Operational Program for Exchange of Weather Radar Information (EUMETNET/OPERA)*. GloBAM has access to these data via the *EIG EUMETNET license agreement for Research use of OPERA data*. This license agreement grants a specific list of people (involved in ENRAM and GloBAM) access to radar data from selected countries under the following conditions (excerpt):

The OPERA Members Data will be provided for use within the ENRAM Project for the purpose of extracting animal migration information for scientific research. The Grant of this License does not permit use of the OPERA Members Data licensed to be used for commercial purposes or exploitation for profit.

2.2 Radars

OPERA manages a list of radar metadata (232 radars). This **OPERA database** is available as:

- interactive map
- json file: source file for the map. This file is also archived on GitHub every time we update the DMP, so we can track changes.

The license agreement allows access to data from 19 countries.

##	country	iso_code	radars	operational
##	Austria	AT	5	5
##	Belgium	BE	3	3
##	Croatia	HR	5	2
##	Czechia	CZ	2	2
##	Denmark	DK	5	5
##	Estonia	EE	2	2
##	Finland	FI	10	10
##	France	FR	31	25
##	Germany	DE	20	20
##	Netherlands	NL	3	2
##	Norway	NO	11	11
##	Poland	PL	8	8
##	Portugal	PT	4	3
##	Slovakia	SK	4	4
##	Slovenia	SI	2	2
##	Spain	ES	15	15
##	Sweden	SE	12	12
##	Switzerland	CH	5	5
##	United Kingdom	GB	16	16
##	Total	-	163	152

2.3 Historical archive

GloBAM needs a **2-3 year archive** of European **pvol** and derived **vp** data to tackle its research questions. By starting from a **pvol** archive, the generation of **vp** data can be reproduced if need be, e.g. to make sure adequate **vol2bird** settings/versions are used.

2.3.1 Source and access

- **pvol**: BALTRAD (2.4.2.1) is likely to be the best source. **Restricted access**
- **vp**: ENRAM data repository (2.6.1). **Open data**
- **vpts**: ENRAM data repository (2.6.1). **Open data**

2.3.2 Coverage

The BALTRAD archive needs to be assessed for coverage and quality before we can define the subset of the archive we want to use. Tasks for this are listed here and include:

1. Get a file listing for **pvol** archive
2. Select subsets: first 2 days of data per radar/month for 2016, 2017, 2018 (72 days): either **pvol** or pre-merged scans
3. Transfer subsets to accessible FTP server
4. Merge to **pvol** (test 1)
5. Process with **vol2bird** to **vp** (test 2)
6. Store output **vp** files
7. Visual control of **vp** (test 3)

2.4 PVOL

pvol data are polar volume data. These are generated by weather radars and the source for vertical profiles (**vp**) of biological targets.

2.4.1 Format

- Format: `hdf5` in the OPERA ODIM_h5 format.
- Granularity: a `pvol` file is typically generated every 15 minutes and contains scan data at about 20 altitudes.
- Read in bioRad with: `read_pvolfile`.

2.4.2 Source

2.4.2.1 BALTRAD

The best source for consolidated `pvol` data is **BALTRAD**, managed by SMHI (contact person: Günther Haase). `pvol` data are archived there, but access to that server is restricted to SMHI. For data to be available in BALTRAD, several conditions need to be met (source):

1. A country should send both reflectivity and radial velocity data to the OPERA data centre, which is called ODYSSEY. While many countries are sending reflectivity data, radial velocities are still unavailable for many countries.
2. ODYSSEY should forward these data to the BALTRAD datahub. It is standard policy to do so, but in practice data is not yet forwarded correctly for some radars/countries.
3. Currently BALTRAD and ODYSSEY store data at a 15 minute interval, higher resolution data is not yet available.

2.4.2.2 Research labs

Some research labs (e.g. UvA) also have archived `pvol` data for a subset of radars/years.

2.4.2.3 National weather services

More or more precise `pvol` data can be available at the national weather services as well.

2.4.3 Access

Restricted access: access and use of `pvol` data is subject to the license agreement (2.1). These data cannot be shared further without approval from OPERA. Transferring these data to a (private) cloud platform is also sensitive.

2.4.4 Coverage

Coverage of the `pvol` archive at BALTRAD is currently unknown. Availability and coverage are being gathered in this spreadsheet.

2.4.5 Up-to-dateness

`pvol` data at BALTRAD are normally up to date to within a day.

2.5 PVOL → VP

...

2.6 VP

vp

2.6.1 Source

vp data generated at BALTRAD are transferred daily to the ENRAM data repository.

2.6.2 Access

Open data: Data in ENRAM data repository are available under a Creative Commons Zero waiver.

2.6.3 Format

- Format: `hdf5` in the ODIM bird profile format specification.
- Granularity: a `vp` file is generated for each originating `pvol` file.
- Read in bioRad with: `read_vpfiles`.

2.6.4 Coverage

The coverage of the ENRAM data repository is recorded daily in `coverage.csv` and summarized here:

##	radar	2016	2017	2018	2019	Total

2.6.5 Up-to-dateness

The ENRAM data repository is updated daily.

2.7 VPTS

2.7.1 Format

To be defined: <https://github.com/enram/globam-dmp/issues/16>

2.7.2 Source

These files are not yet generated, but will be stored in the ENRAM data repository.

2.7.3 Access

Open access

2.7.4 Coverage

Not yet defined.

2.7.5 Up-to-dateness

Not yet defined.
